There are different classes of anti-diabetic drugs, and their selection depends on the nature of the diabetes, age and situation of the person, as well as other factors. Diabetes mellitus type 1 is a disease caused by the lack of insulin. Insulin must be used in type 1, which must be injected.

*Phytochemical and Pharmacological Properties of Gymnema.*

Jan 06, 2014 · Supplementary Table 1 describes the occurrence of gymnemic acid in various plant parts of Gymnema sylvestre. The highest percentage of gymnemic acid is present in shoot tip (54.29 mg g⁻¹ DW) and lowest is in seeds (1.31 mg g⁻¹ DW) respectively. Supplementary Table 2 summarizes the therapeutic potential of various plant parts and their application in ...

May 15, 2021 · The most effective management of diabetes mellitus demands an interprofessional approach involving both lifestyle modifications with diet and exercise and pharmacologic therapies as necessary to meet individualized glycemic goals. Lifestyle modifications must be combined with oral pharmacologic agents for optimal glycemic control. ...
